A new substrate for protein tyrosine phosphatases (PTPases) is described. The substrate is composed of a dansyl group attached to a tyrosine residue on a protein through a cysteine residue. The dansyl group is incorporated in the PTPase's active site to form a Michael-type conjugate. The covalent attachment of the dansyl group to the tyrosine residue is thermodynamically favored over its random attachment. Thus, under basic conditions, where PTPase activity is low, the modified tyrosine is incorporated into a protein by a reaction that is faster than the random attachment of the dansyl group. However, in the presence of active PTPase, the PTPase activity causes dephosphorylation of the protein, which enhances the incorporation of the dansyl group. The substrate displays a marked fluorescence increase when incubated with various active PTPases, especially high activity PTPases. The substrate is a valuable tool to detect and measure the activity of various PTPases and their phosphatase-inhibitor complexes.Shopping for online retailers is a growing business for savvy entrepreneurs. According to a 2014 report from The Commerce Department, online retail sales grew 7.1 percent in the second quarter of 2014, compared to a 5.4 percent growth for brick-and-mortar retail in the same period. That growth may be hard to keep up, however, as the report also noted that “declining GDP growth, a weak consumer, and weak employment conditions could dampen the growth rate in 2015.” As a result, it’s important to get the most out of your online shopping experience. One way to do that is to turn to a trusted platform like Shopify. Shopify – An All-in-One Solution Shopify is an all-in-one online platform that can help online retailers manage their inventory and product listings, manage customer order processing
